\* Modifier to opponents observation check to notice if trying to hide weapon on your character and you are being actively searched.

- 1) Can only fire carefull or steady shots in a combat round. Reload is instant if carrying a Quiver. A quiver can contain 50 arrows.
- 2) Can be used for sniping with +1 modifier (similar to Rifles)
- 3) Can also be used in brawls as knuckles adding +1 to brawling rolls
- 4) Premium quality weapons that are state of the art weapons. Rare availability - only in large towns. Can cost more depending on accessibility.
- 5) You do not need to apply -1 initiative penalty for cocking your gun first time when shooting with this weapon.
- 6) Heavy weapons normally only available to military organisations and are not put up for sale.
- 7) A fighting knife and pistol combined into one. Can be used as knife in brawling or knife fights. Cannot be thrown.

## Small pistols

Colt Derringer

Generally the smallest usable handgun. It was frequently used by women, because it is easily concealable in a purse or as a stocking gun. Such weapons designed specifically for women were called "muff pistols", due to their compact size enabling them to be carried in a muff.

Small pistol Single action 5 0.22 1 shot

Remington Double Derringer

The Remington derringer design doubled the capacity, while maintaining a compact size, by adding a second barrel on top of the first. Each barrel then held one round. It can be used in fights, but at very close range, such as at a casino or saloon card table, it could easily kill. The Remington achieved widespread popularity over all other designs, becoming synonymous with the word "Derringer"

Small pistol, Double barrel Single action 10 0.22 2 shots

Knuckle-duster

Easy to conceal and with a unique design made the weapon a handy bludgeoning weapon as well if entering a brawl. Both a firearm and a Brass Knuckle in one weapon. It is said that the weapon gets its name from leaving gunpowder dust on the shooters hand when fired

Small pistol Single action 10 0.22 1 shot

Sharps Pepperbox

One of the more common derringers found in the "Old West" were the Sharps Derringers. They are four-barrel, single-action pepperbox derringers with a revolving firing pin. Their four barrels slide forward to load and unload. These first model derringers had brass frames and fired the recently introduced .22 Rimfire metallic cartridges.

Small Pistol, 4 barrels Single action 15 0.22 4 shots

## Pistols

**Smith and Wesson**

This weapon relied on the loading of loose powder and ball, and although this meant that the gun would be slow to load, the method was practical and dependable. During the American civil war, the majority of revolvers were cap and ball. Caband Ball revolvers has a small chance of exploding if weapon misfires due to all rounds going off at once.

Normal Revolver

Cab & Ball

20

0.38

6 shots

**Starr**

Double action revolver that performs three actions during a trigger pull: Automatically cocks the hammer, releases the hammer to fire the weapon and rotates the cylinder. This mechanism comes with a downside as the trigger is requires a harder pull compared to a single action revolver, thus making it a bit slower. However first shot is faster than a single action revolver that must manually be cocked.

Normal Revolver

Double action

28

0.38

6 shots

**LeFauchaux Knife Revolver**

The LeFauchaux knife revolver is a combination of a double-action revolver and fighting knife. This double-action, six-shot revolver, has a part-octagon barrel extended into a 12-inch knife blade.

Knife Revovler

Version 4.0 June 2019

Model	Description	Weapon Type	Loading type	Price (\$)	Caliber	Shot capacity
<b>Remington</b> 	<p>Single action revolver is the pistol type became the most frequently used after the Cab &amp; Ball revolver. Single action means that the hammer strikes every time the trigger is pulled. However the hammer must be manually cocked before every shot to rotate the cylinder. This comes with a -1 initiative penalty downside - but this is outweighed by the trigger is easier and faster to pull.</p>	Normal Revolver	Single action	30	0.38	6 shots
<b>Griswold</b> 	<p>The Griswold Revolver was produced in Griswoldville, Georgia between 1862-1864. Used in the South States and by the Confederations army. The frame and trigger guard is brass. The grips are one piece walnut. They are marked with a serial number along with assembly numbers, inspector's mark and benchmarks</p>	Normal Revolver	Single action	40	0.38	6 shots
<b>Colt 1873</b> 	<p>Fast draw revolver with shortened barrel and limited weight compared to other revolvers. Both enabling a faster draw from a holster. Often the cock was placed a bit higher making it easier to do fangunning if needed.</p>	Fast Draw Revolver	Single action	40	0.38	6 shots
<b>Colt Buntline</b> 	<p>The Colt Buntline Special is a long-barreled variant of the Colt Single Action revolver with extended barrel of 12-16 inches. Due to the long barrel it is slower to pull, but offers an extended shooting range and as the only type of revolver this can be used for sniping similar to rifles (resting the barrel on some support to gain +1 sniping accuracy modifier)</p>	Long Barrel Revolver	Single action	50	0.45	6 shots

Colt Peacemaker	 <p>The Peacemaker, also called the Equalizer, had its first wide use in the Cavalry, where the army recognized the gun's potential. It was used it as the official army weapon until World War II. It was very popular because it used the same rounds as the popular Winchester rifle. The Peacemaker became every man's dream despite being expensive, as its reliability and elegance made it legendary.</p>	Premium Revolver	Single action	60	0.45	6 shots

## Rifles

Springfield		The Springfield Model 1861 was a musket shoulder-arm used by the United States Army and Marine Corps during the American Civil War. Named after its original place of production, Springfield, Massachusetts, it was favored for its range, accuracy, and reliability. The Springfield had a general effective range of 200 to 300 yards, but could reliably hit man sized targets out to 500 yards	Musket	Powder, Muzzle load	12	0.58	1 shot
Kentucky Rifle		The long rifle, also known as Kentucky rifle, was one of the first commonly used rifles for hunting and warfare. It is characterized by an unusually long barrel. The long rifle uses rifling, which causes the projectile to spin around and increase the stability of its trajectory and dramatically improved accuracy over contemporary smooth bore muskets, which were cheaper and more common.	Muzzle-loading Rifle	Powder, Muzzle load	17	0.45	1 shot
Sharps Rifle		Sharps rifles are a series of large-bore single-shot breech loading rifles. They were renowned for long-range accuracy. By 1874 the rifle was available in a variety of calibers, and had been adopted by the armies of a number of nations. . Also commonly used as sporting rifle for commercial buffalo hunting and competitive game hunting	Single Barrel Rifle	Breech Loading	20	0.45	1 shot

# WEAPON DESCRIPTION

Model	Description	Weapon Type	Loading type	Price (\$)	Caliber	Shot capacity
<b>Colt Rifle</b> 	<p>The design of the Colt Revolving rifle was essentially similar to teh colt pistol, with a rotating cylinder that held six rounds of same 0.38 caliber as the standard colt. Colt revolving pistols and rifles were attractive mainly because of their high rate of fire making them average speed. However the downside was it takes some time to reload.</p>	Revolving Cylinder Rifle	Cylinder loading	28	0.38	6 shots
<b>Spencer Rifle</b> 	<p>The Spencer Repeating Rifles were early American lever action firearms. The Spencer was the world's first military metallic cartridge repeating rifle. The Spencer repeating rifle was adopted by the Union Army cavalry, during the Civil War but did not replace the muzzle-loading rifled muskets in use at the time. The Confederates occasionally captured some of these weapons and ammunition</p>	Lever action Rifle (6)	Turbular magazine	30	0.58	6 shots
<b>Henry Repeating Rifle</b> 	<p>The Henry repeating rifle is a lever-action, tubular magazine rifle famed both for its use at the Battle of the Little Bighorn and being the basis for the iconic Winchester rifle of the American Wild West. It was adopted in small quantities by the Union in the Civil War. Many later found their way West, notably in the hands of the Sioux and Cheyenne.</p>	Lever action Rifle (9)	Turbular magazine	40	0.45	9 shots
<b>Winchester 1866 "Yellow Boy"</b> 	<p>Developed from the 1860 Henry rifle, the Winchester 1866 rifle was nicknamed the "Yellow Boy" because of its receiver of a bronze/brass alloy called gunmetal. It was famous for its rugged construction and lever-action "repeating rifle" mechanism that allowed the user to fire a number of shots before having to reload.</p>	Lever action Rifle (12)	Turbular magazine	70	0.45	12 shots

<b>Winchester 1873</b> 	<p>The Model 1873 was one of the most successful Winchester rifles of its day, with Winchester marketing it as "The Gun that Won the West". Winchester established a "One of One Thousand" grade in 1875. Barrels producing unusually small groupings during test-firing were fitted to rifles with set triggers and a special finish. If Marked "One of One Thousand", they sold for around \$100-120</p>	Lever action Rifle (15)	Turbular magazine	80	0.45	15 Shots
<b>"Big Fifty" Sharps Buffalo Rifle</b> 	<p>First introduced in the 1872, the frontiersmen dubbed it the "Big Fifty," or the "Texas Fifty. It was a favorite choice for buffalo, Elk and Bear hunters during the hide hunting years due to it large caliber and longest range. It was with this round that hunter Billy Dixon accomplished his famous +1,000 yard shot, toppling an Indian warrior during the 1874 battle of Adobe Wall in Texas</p>	Single action	Powder and breech	30	0.75	1 shot

## Heavy Weapons

Gatlin Gun		<p>The Gatling gun is the best-known early rapid-fire spring loaded, hand cranked weapons, and a forerunner of the modern machine gun and rotary cannon. Invented by Richard Gatling, it saw occasional use by the Union forces during the American Civil War. The Gatling gun's operation centered on a cyclic multi-barrel design which facilitated cooling and synchronized the firing-reloading sequence. Each barrel fired a single shot when it reached a certain point in the cycle, after which it ejected the spent cartridge, loaded a new round, and, in the process, allowed the barrel to cool</p>	Semi automatic weapon	40 round Cartridge	N/A	0.58	40 Shots
Cannon		<p>Civil War artillery played a very important part during the American Civil War. It was used against infantry, buildings, fortifications, and ships. Artillery was limited during the Civil War to firing at targets the gunners could actually see. There were no forward observers who could direct fire onto a target. Artillery fought side by side with the infantry on the battlefield. Most artillery during the Civil War were muzzle loading guns.</p>	10 or 12 Pounder cannon	Cannon Balls	N/A	10/12 Pounder	1 Shot
